Phone 270/852-5000

Re: Use of Southern Star's Land Use Development and Right – of – Way Handbook

Southern Star Central enjoys easements generally 66 feet in width, unless specifically noted otherwise in the applicable easements. As such, the Standard Encroachment Drawings provided on this site assume a 66-foot total right of way width, or 33-feet on each side of the pipeline, and are provided only as a guide to assist you in planning your project. To verify the right of way width in the area of your project, please contact the Land Representative nearest you.

You should also be aware that the Southern Star Central Engineering Department must review and approve the plans for any work within our rights of way at least 30 days before the beginning of actual work on the project. A specific Encroachment Agreement may be required prior to you beginning the actual work and your Land Representative will be glad to visit with you regarding that agreement.
